

KASIA KEDZIERSKA

For my PhD @ **University of Oxford**, I studied cancer of the uterus and chromatin organisation in disease progression. Over the summer, I joined the **bioML team** at the [Microsoft Research New England](#) as an intern where I worked on **Foundation Models** in single-cell biology.

Previously, I worked with **NLP** methods and knowledge graphs during my internship @ [Novo Nordisk Research Centre in Oxford](#). Using **Transfer Learning** and **YOLO model** I built a framework to identify sea pens from a video footage of an ocean floor @ [Turing Data Study Group](#).

With extensive domain knowledge in **Computational Biology** complemented by my experience in **Data Science & Machine Learning** I am eager to drive advancements at the crossroads of these disciplines.

RESEARCH EXPERIENCE

- 2023** ● **Intern @ [Microsoft Research New England](#), Cambridge, Massachusetts, USA**

During the summer I investigated the potential of the **Foundation Models** in the space of single cell biology. I was mentored by [Alex Lu](#), [Ava Amini](#), and [Lorin Crawford](#).
- 2021** ● **Intern @ [Novo Nordisk Research Centre Oxford](#), Oxford, United Kingdom**

I worked with **NLP** and **knowledge graphs** to screen **biomedical articles** to identify and prioritise therapeutic targets. To increase the impact of the analysis and increase reach I built and deployed an **interactive dashboard** (using **R Shiny**) to allow colleagues within the company to investigate and visualise the results directly in real-time.
- present | 2018** ● **DPhil Researcher @ [Wellcome Centre for Human Genetics, Big Data Institute](#), University of Oxford, UK**

In my PhD project I'm looking at how **chromatin organisation** influences **disease initiation and progression** in uterine cancer using multimodal data. Currently, I'm working on building and refining ML models of **cancer evolution**, specifically identifying evolutionary trajectories in the cancer of the uterus.
- 2018 | 2017** ● **Visiting Graduate Student @ [Ratan](#) group, University of Virginia, USA**

I carried out the research for my Master thesis *Analysis of the mutational burden across gene sets in cancer* in which I modeled **somatic mutations** background distribution using **germline variation**. I also developed [SONICS](#) - algorithm to genotype Short Tandem Repeats (STRs) using dense forward simulations of the polymerase chain reaction (PCR).
- 2017 | 2016** ● **Visiting Graduate Student @ [Pemberton](#) group, University of Virginia, USA**

Investigated **epigenetic regulation in prostate cancer** using mouse models of primary, invasive and metastatic tumors. I planned, carried out experimental work and analysed results of RNA-seq, CHIP-seq and ATAC-seq assays.
